

Instructions

1. Remove the applicator tip protective cap, and store it on the handle cap when using the wand.
2. Press the center of the foam applicator tip to activate the valve.
3. Use the funnel handle to fill the wand with any liquid herbicide including organic choices. Mix herbicide according to the herbicide manufacturer's instruction.
4. Press the applicator tip with piercing points and pressure valve down on the weed to bruise and pierce the plant injecting and covering the weed with herbicide.

5. Clean the applicator tip after use if needed.
6. Long term storage: place unused herbicide in appropriate container, and rinse the wand with water.
7. Use the hanging ring on the handle for convenient storage.

Professionals Demand!**

Used Worldwide By

- Golf Courses
- Farmers
- Ranchers
- Nature Reserves
- Prairie Restoration Groups
- Crop Production Services
- Botanical Gardens
- Municipalities
- Amusement Parks
- Landscapers
- Turf Management
- Homeowners

Helpful Tips

- * For best results, apply herbicide on a warm sunny day when the weed is actively growing.
- * Do not leave the wand in full sun.
- * If you store the wand filled with herbicide, store with the handle down and the applicator tip up.
- * You can increase the herbicide flow by slightly opening the handle cap. Retighten cap after use.
- * Because the wand uses herbicide so efficiently, we recommend filling the wand 1/3 to 1/2 full for most jobs, this reduces the operating weight to only 8.25 ounces.
